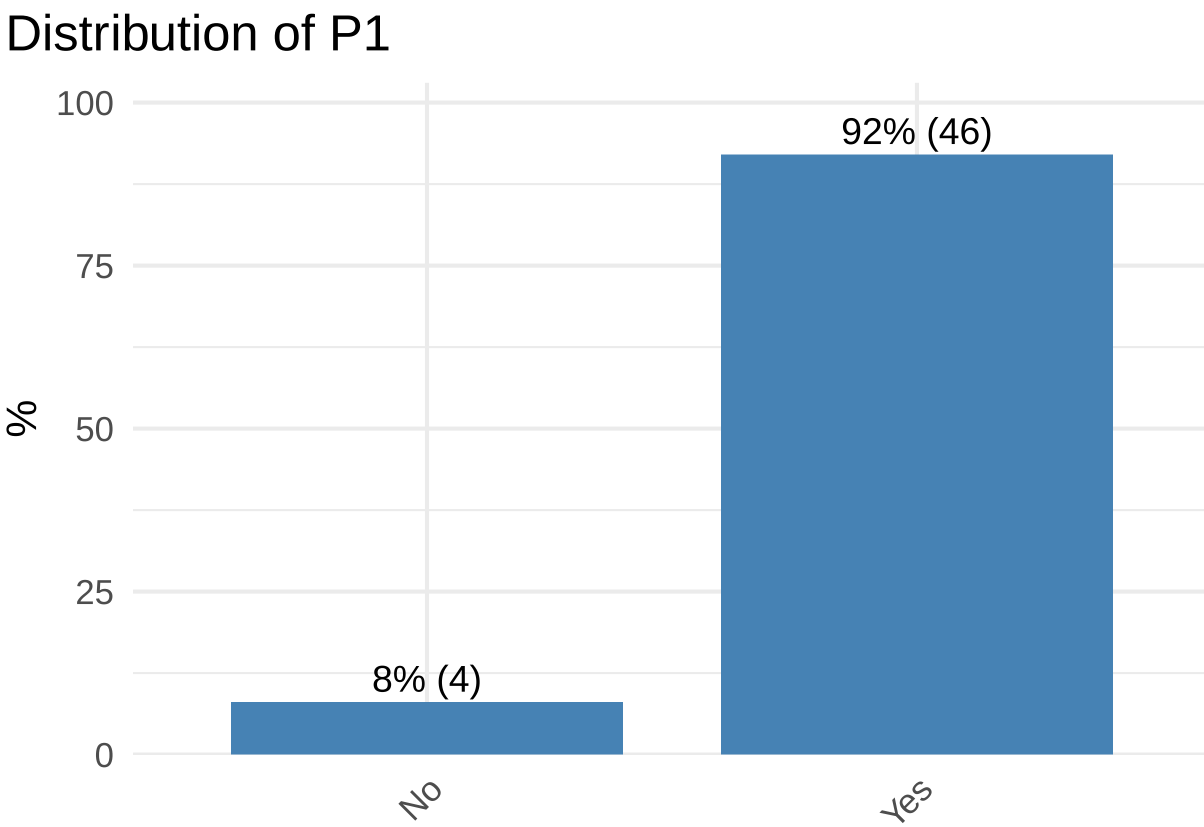
The file drawer problem in experimental philosophy: what is not published and why?

Prescreening

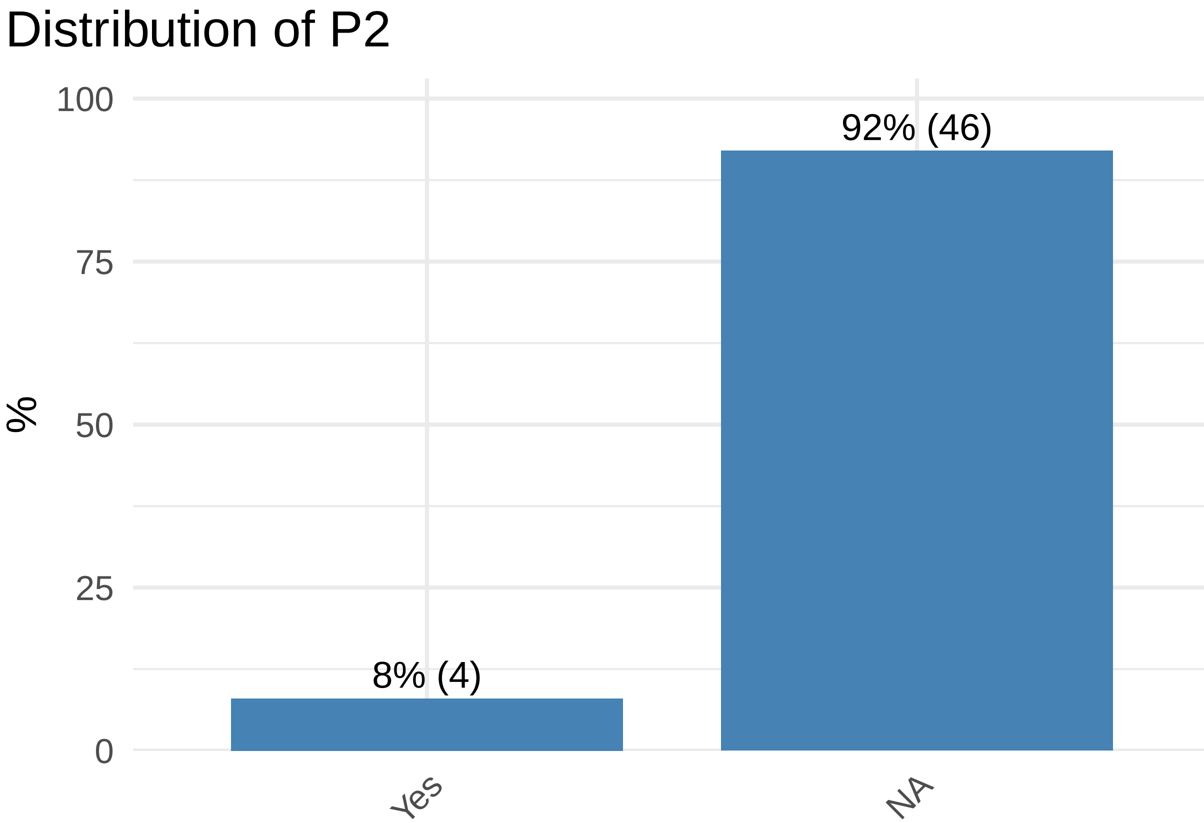
[P1] Have you completed a doctoral degree (or equivalent terminal degree, e.g., PhD, EdD, JD, MFA, MBA)?

P1	n	%
No	4	8.00
Yes	46	92.00



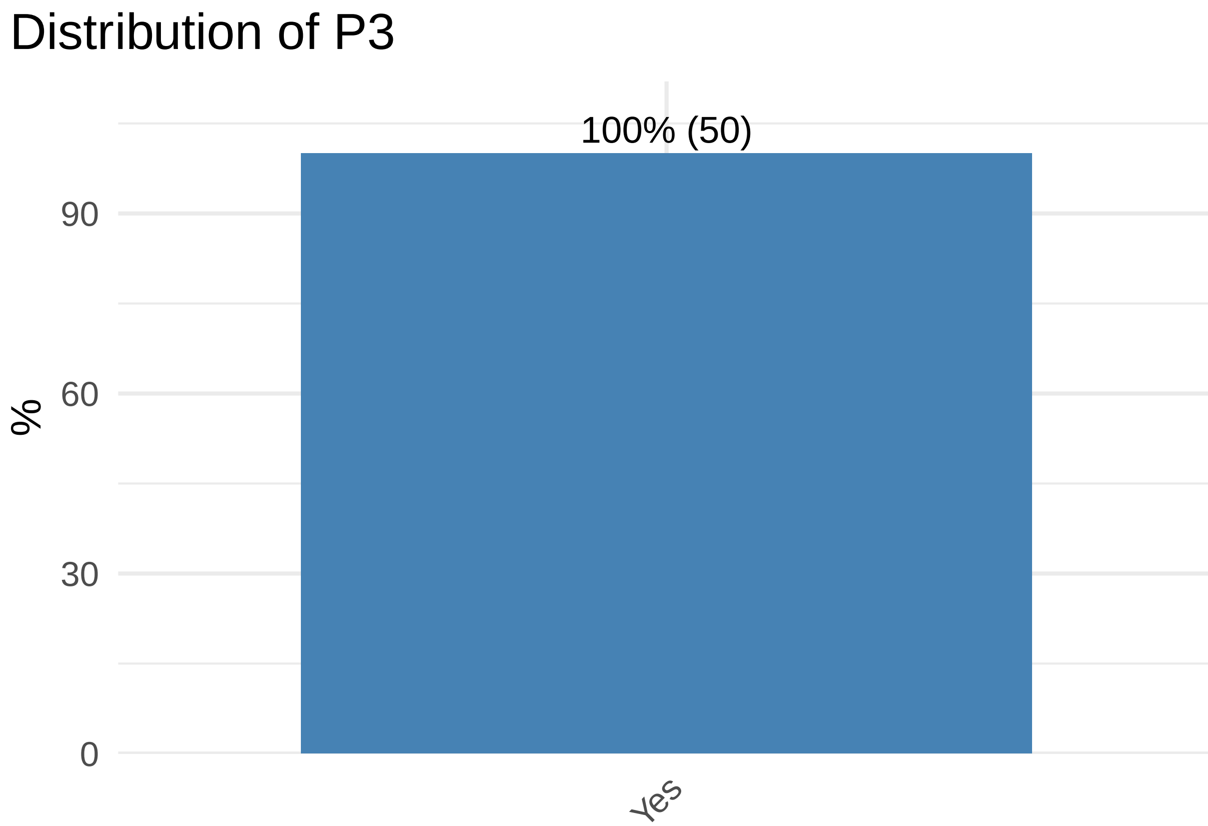
[P2] Are you currently pursuing a PhD in philosophy or a related field (e.g., cognitive science, psychology)?

P2	n	%
Yes	4	8.00
	46	92.00



[P3] Do you conduct quantitative experimental or empirical research in experimental philosophy or related to experimental philosophy? (Note: By quantitative research, we mean research with data collection that results in numerical data)

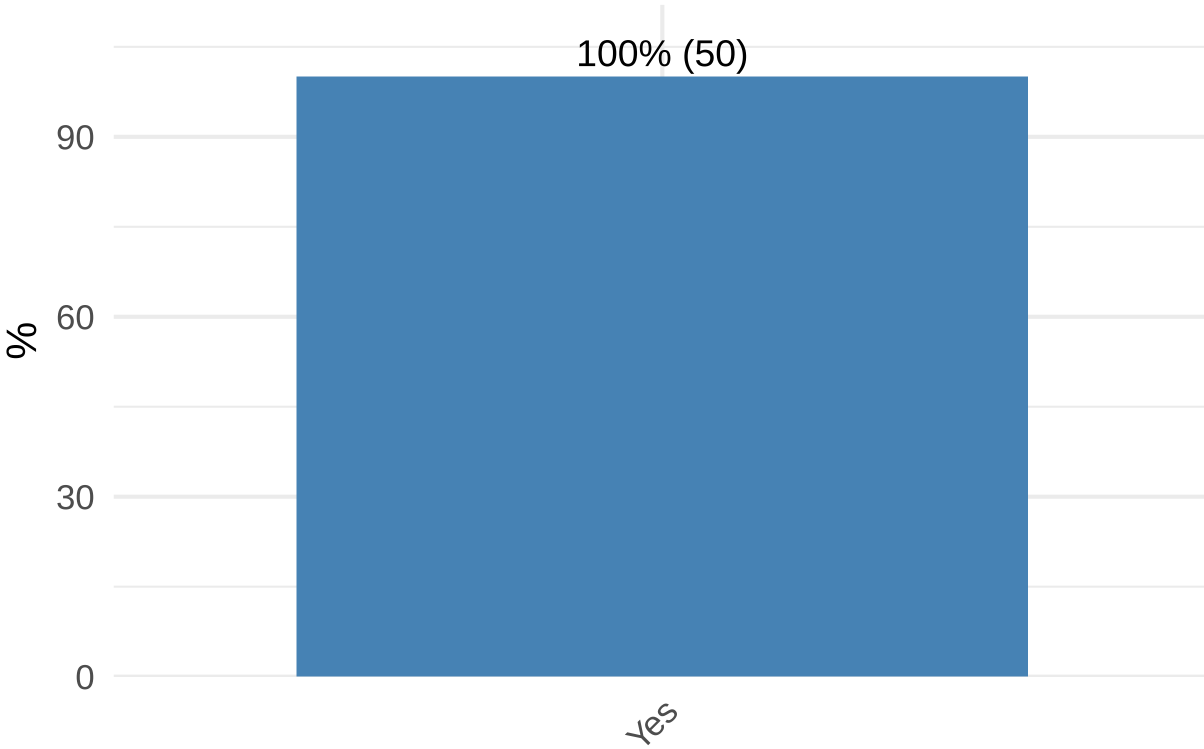
P3	n	%
Yes	50	100.00



[P4] Are you currently affiliated with a university/research institution (e.g., as a student, faculty member, or researcher)?

P4	n	%
Yes	50	100.00

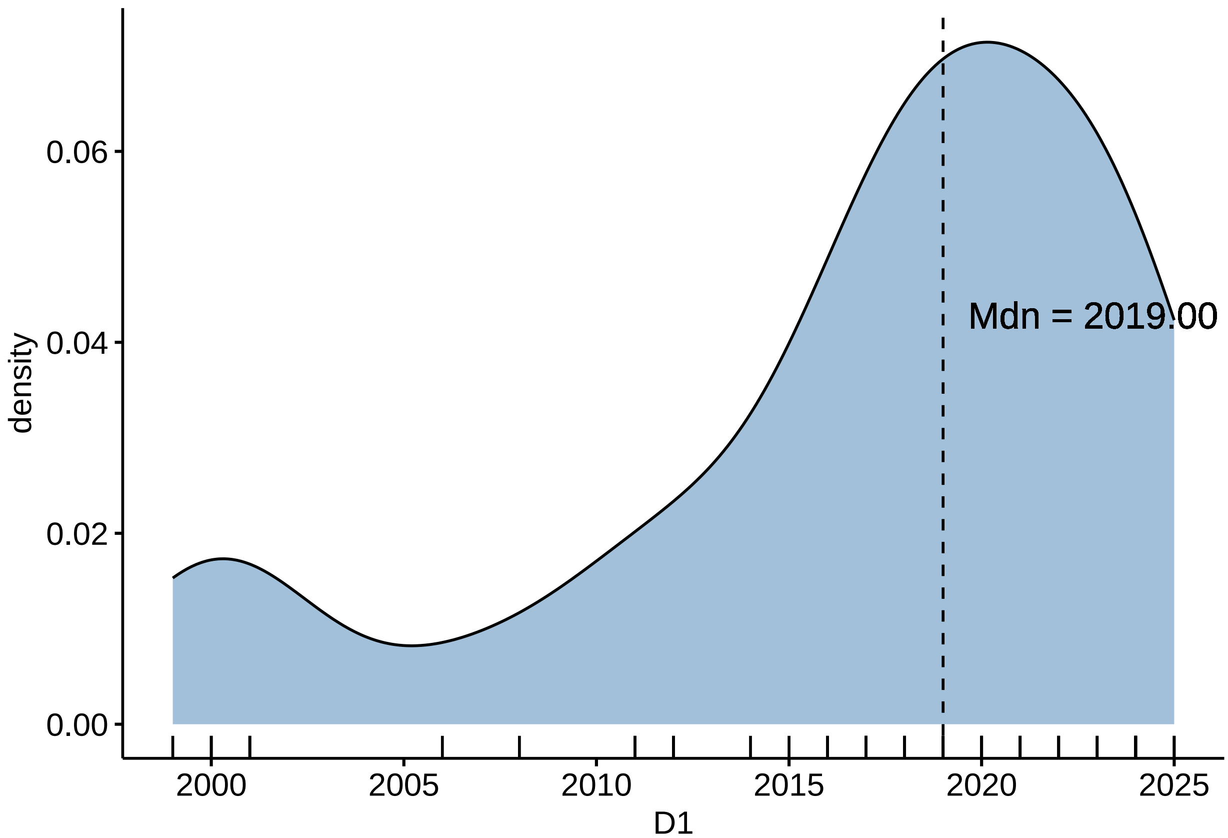
Distribution of P4



Demography

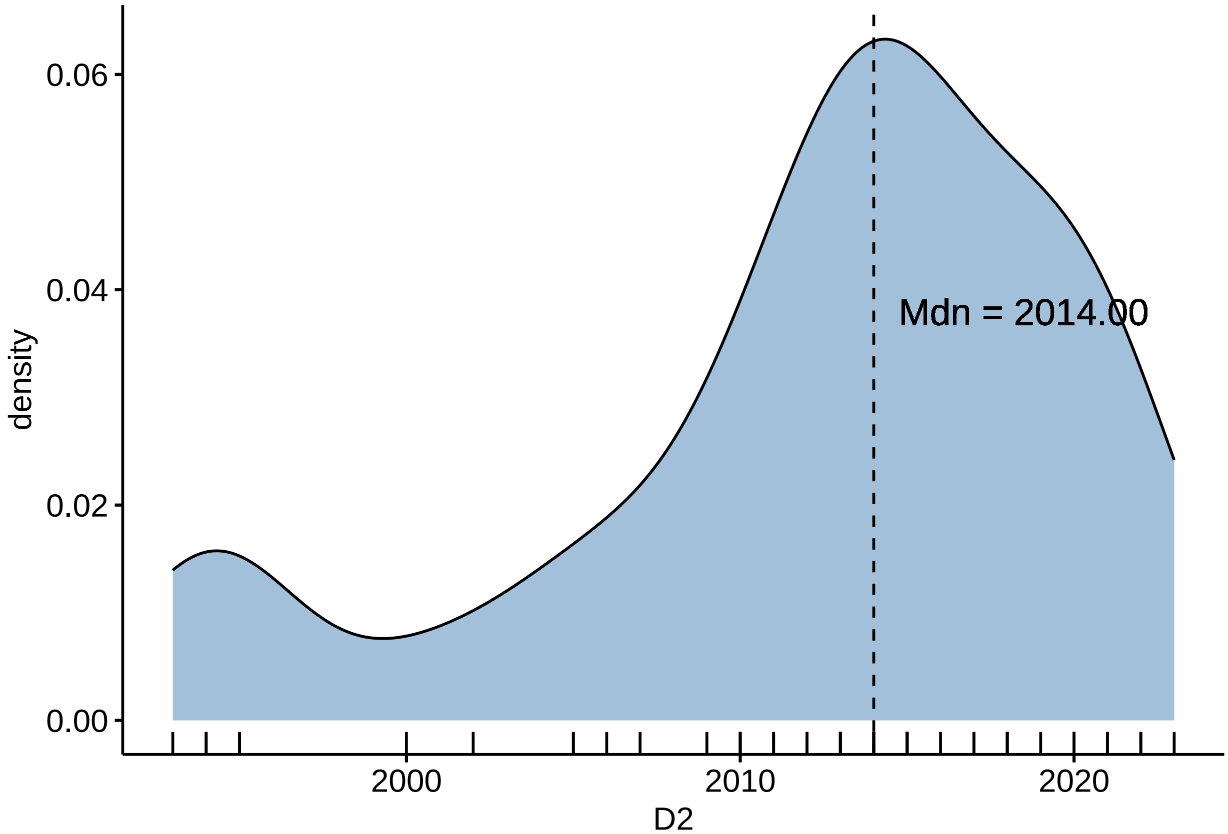
[D1] In which year did you complete your first doctoral (or equivalent terminal) degree (e.g., PhD, EdD, JD, MFA, MBA)?

n	M	SD
46	2,016.72	7.34



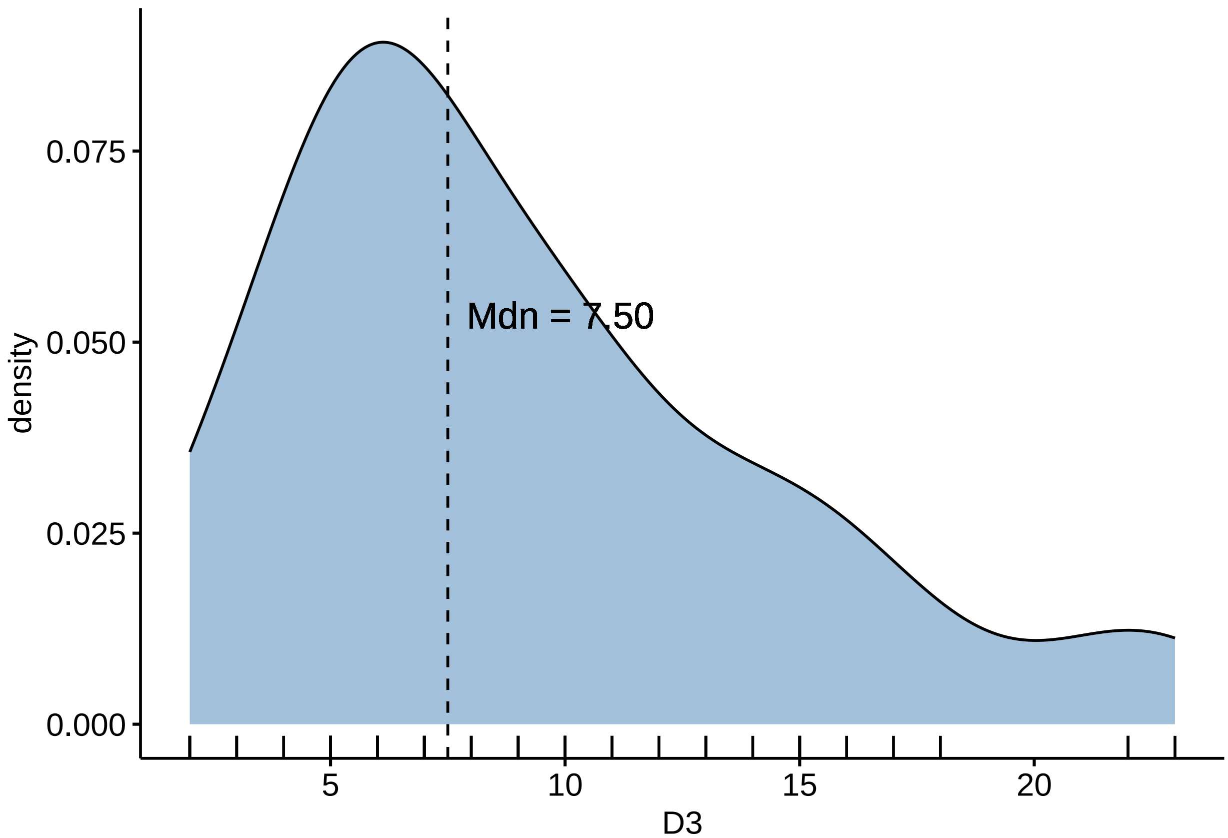
[D2] In which year did you begin your first doctoral (or equivalent terminal) degree program?

n	M	SD
50	2,012.22	7.97



[D3] How many years have you been actively conducting research in experimental philosophy?

n	M	SD
50	9.14	5.27



[D4] In which country did you complete your doctoral (or equivalent terminal) degree?

D4	n	%
Australia	1	2.00
Austria	1	2.00
Belgium	2	4.00
Brazil	1	2.00
China	1	2.00
Finland	1	2.00
France	1	2.00
Germany	5	10.00

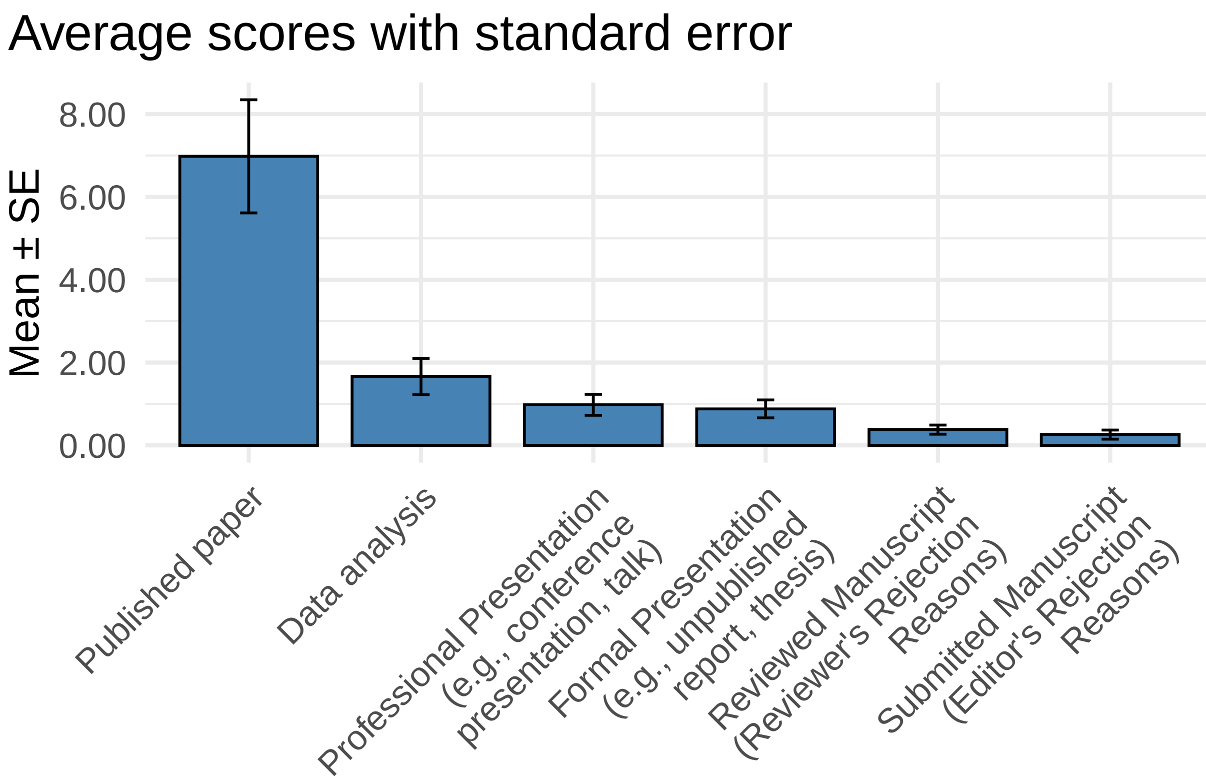
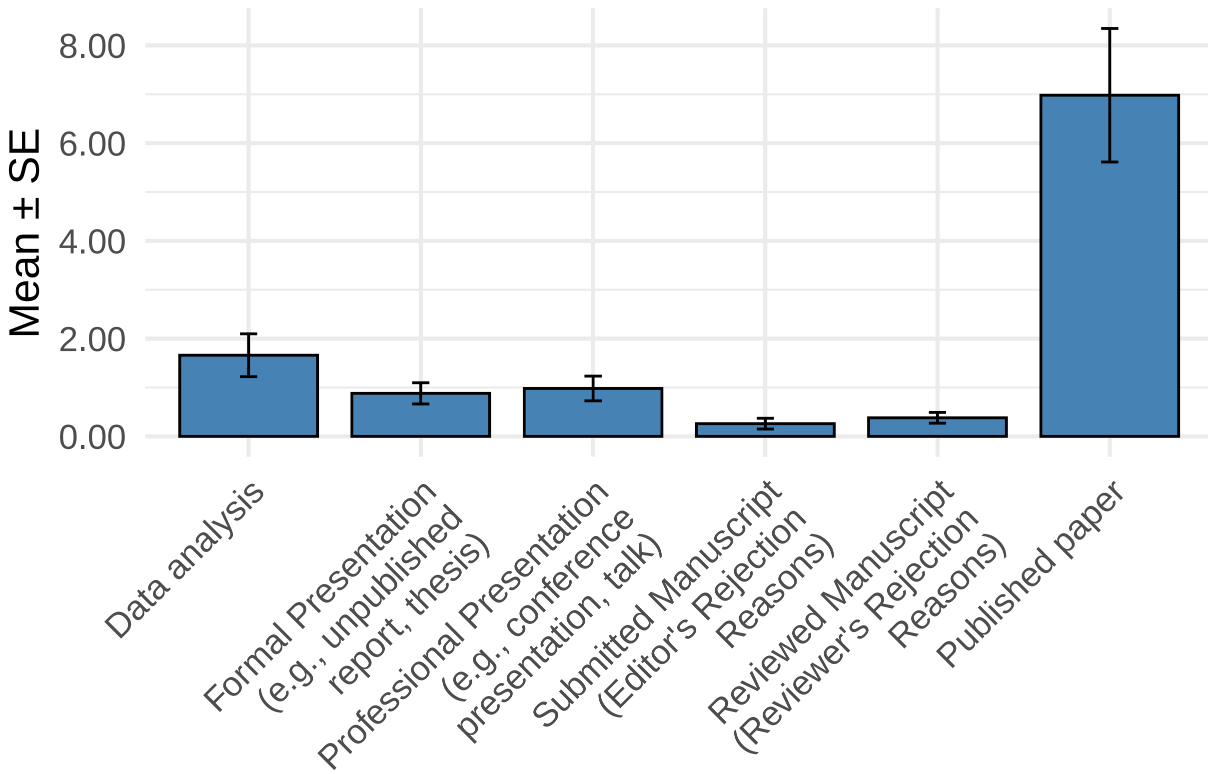
Prevalence

[R1] In the past 5 years, how many of the research projects involving quantitative data analysis you have been involved in (including your students' work) has stopped or terminated at each of the following stages?

Scale	n	M	SD	S
Published paper	50	6.98	9.66	1.
Data analysis	50	1.66	3.10	0.
Professional Presentation (e.g., conference presentation, talk)	50	0.98	1.79	0.
Formal Presentation (e.g., unpublished report, thesis)	50	0.88	1.53	0.
Reviewed Manuscript (Reviewer's Rejection Reasons)	50	0.38	0.78	0.
Submitted Manuscript (Editor's Rejection Reasons)	50	0.26	0.78	0.





[R2] In case of research projects that have stopped or terminated at the stage of data analysis, what were the reasons for termination?

Option	n	%
Loss of interest or lack of resources	14	28.00
Conceptual, methodological, or statistical concerns	14	28.00
Additional studies needed (follow-ups, replications, etc.)	11	22.00
Unimportant or unanticipated results	10	20.00
Null results (non-significant findings)	8	16.00

```

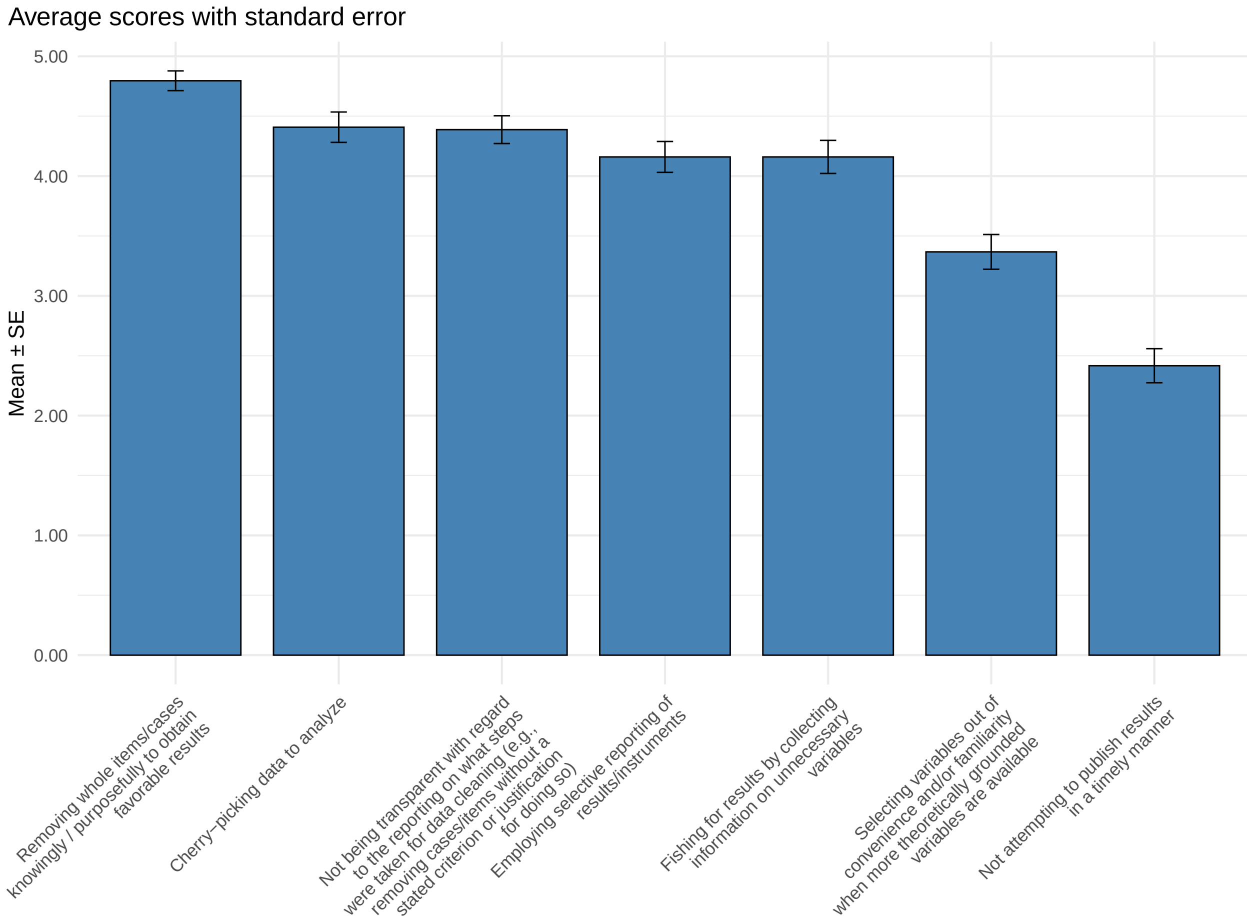
Lack of negative result replications.	Severity	50	3.66
Wasted research efforts due to redundant studies.	Familiarity	50	3.66
Wasted research efforts due to redundant studies.	Severity	50	3.10

Consequence	Question	n	M
Reduced study quality due to pressure for significance.	Familiarity	50	4.00
Reduced study quality due to pressure for significance.	Severity	50	3.68
Career setbacks for early-career researchers or other underprivileged groups.	Familiarity	50	3.46
Career setbacks for early-career researchers or other underprivileged groups.	Severity	50	3.50

[I5] Below is a list of research practices that are sometimes considered problematic in scientific research, including the file drawer problem. Please rate how acceptable you believe these practices are within the community of experimental philosophers.

Scale
Removing whole items/cases knowingly / purposefully to obtain favorable results
Cherry-picking data to analyze
Not being transparent with regard to the reporting on what steps were taken for data cleaning (e.g., removing case
Fishing for results by collecting information on unnecessary variables
Employing selective reporting of results/instruments
Selecting variables out of convenience and/or familiarity when more theoretically grounded variables are available
Not attempting to publish results in a timely manner



Solutions

[S1] Do your research sponsors (e.g., your institution, ethics review committee, or funding agency) require you to do any of the following?

Option	n	%
Develop a data management plan before starting the research.	25	50.00
None of the above.	19	38.00
Make research data publicly available.	18	36.00
Publish in open access journals.	16	32.00
Upload preprints or articles to a public repository.	10	20.00

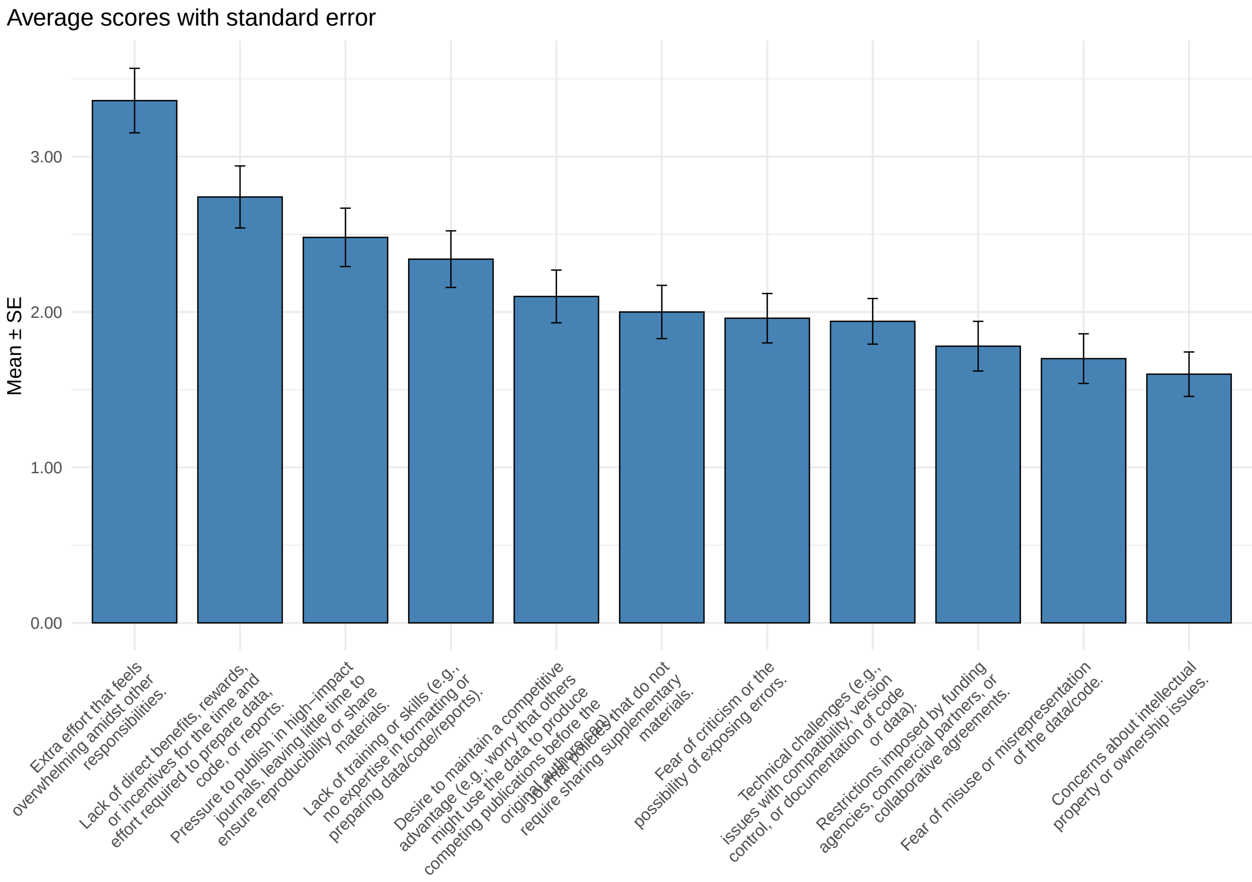
[S5] Below is a list of potential reasons why researchers might not publish their data, code, or research reports. Please rate how much each reason applies to you or your research.

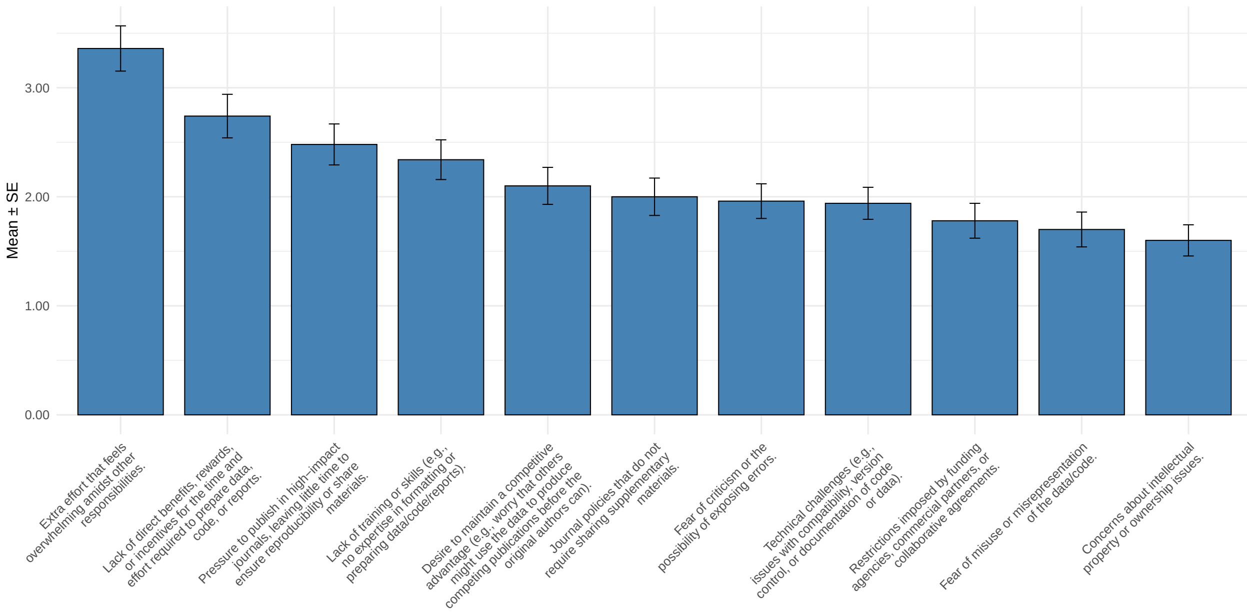
Scale
Extra effort that feels overwhelming amidst other responsibilities.
Lack of direct benefits, rewards, or incentives for the time and effort required to prepare data, code, or reports.
Pressure to publish in high-impact journals, leaving little time to ensure reproducibility or share materials.
Lack of training or skills (e.g., no expertise in formatting or preparing data/code/reports).

Scale
Desire to maintain a competitive advantage (e.g., worry that others might use the data to produce competing publ
Journal policies that do not require sharing supplementary materials.
Fear of criticism or the possibility of exposing errors.
Technical challenges (e.g., issues with compatibility, version control, or documentation of code or data).
Restrictions imposed by funding agencies, commercial partners, or collaborative agreements.
Fear of misuse or misrepresentation of the data/code.
Concerns about intellectual property or ownership issues.



Question	response
Other	Business, laziness, forgetfulness
Other	Laziness
Other	The experiment was ill-conceived and the results are irrelevant for the rationale of the research
Other	There are basically no institutional rewards for providing this stuff, and curating it over time is burdensome

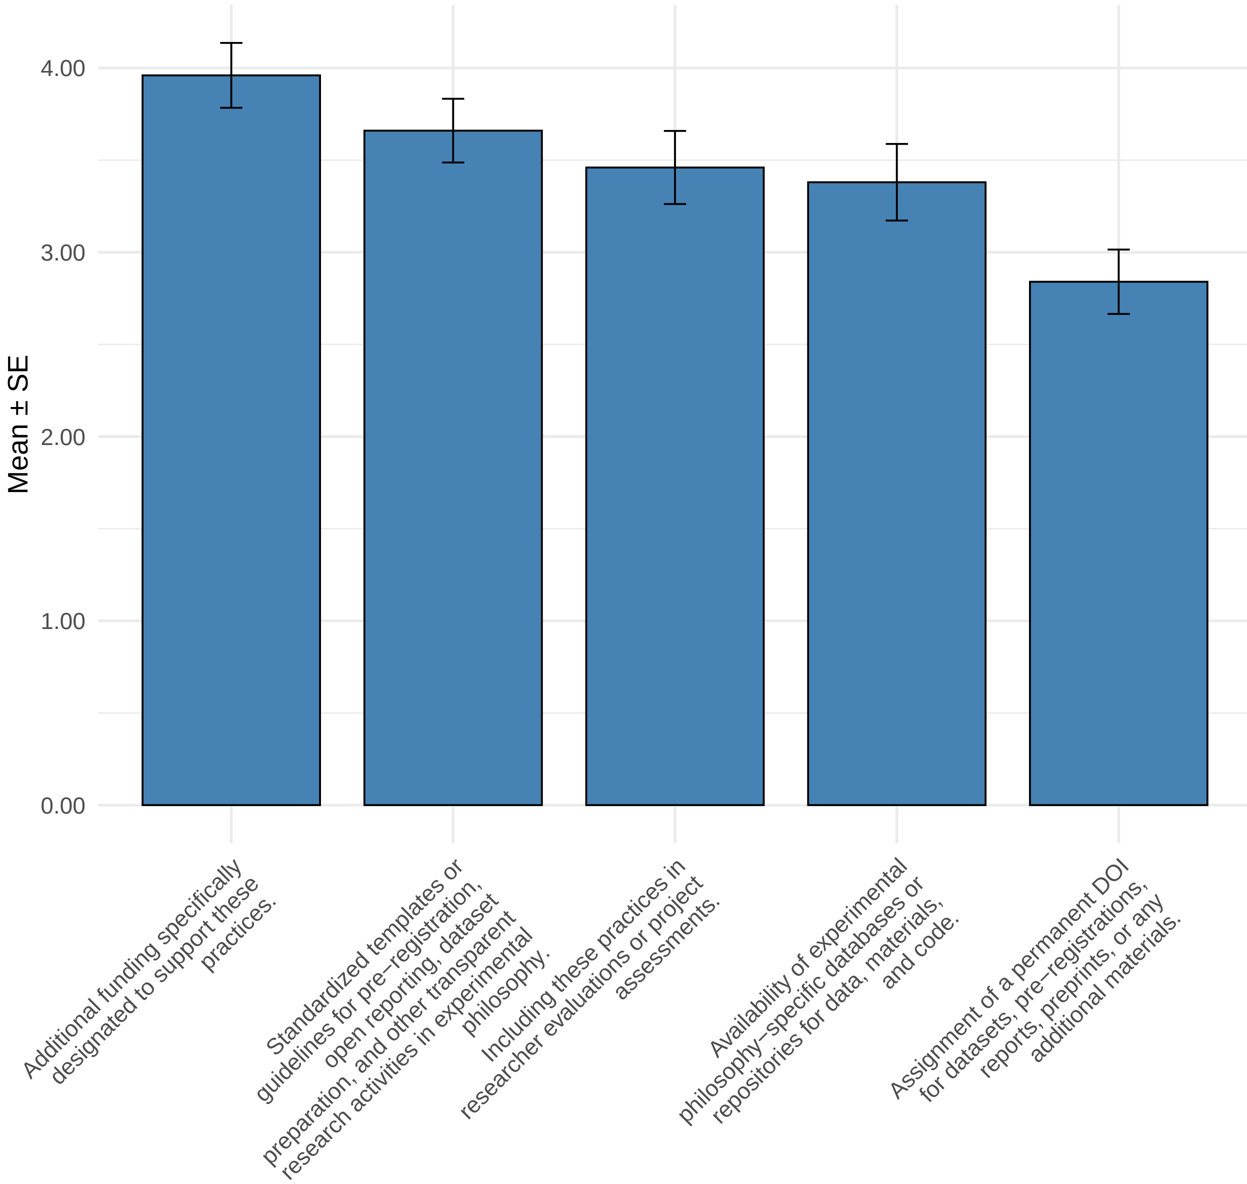
Question	response
Other	student research not of sufficient quality; or, for a another project, results and topic were complex and there was difficulty figuring out how to best move forward empirically and theoretically, given high standards needed for a good paper.
Other	I think I've published open data/stimuli/analysis code on OSF for all projects I was one of the lead authors

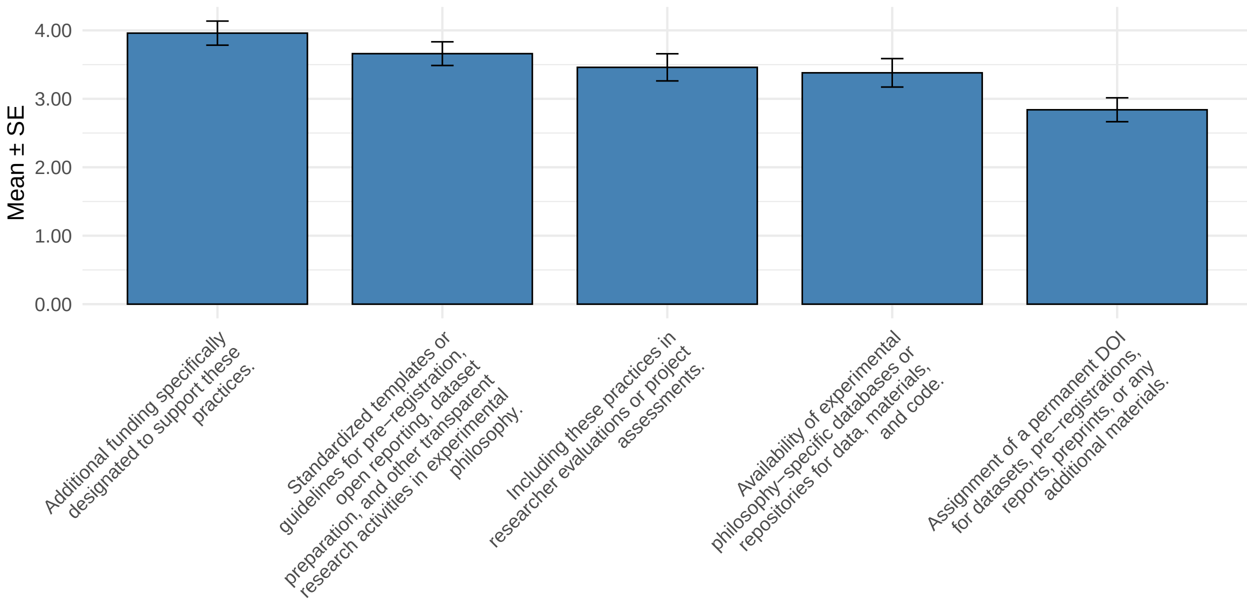


[S6] Evaluate how the following incentives would motivate you to engage in open and transparent research practices, such as sharing data, code, or other research materials, publishing preprints, depositing manuscripts or datasets in open access repositories, citing data or software, pre-registering studies, and submitting registered reports.

Scale
Additional funding specifically designated to support these practices.
Standardized templates or guidelines for pre-registration, open reporting, dataset preparation, and other transpare
Including these practices in researcher evaluations or project assessments.
Availability of experimental philosophy-specific databases or repositories for data, materials, and code.
Assignment of a permanent DOI for datasets, pre-registrations, reports, preprints, or any additional materials.

Average scores with standard error





Reports/micropublication

[M1] Do you publish micropublications, eg., research notes or reports of unpublished studies, negative results, or failed replications?

M1	n	%

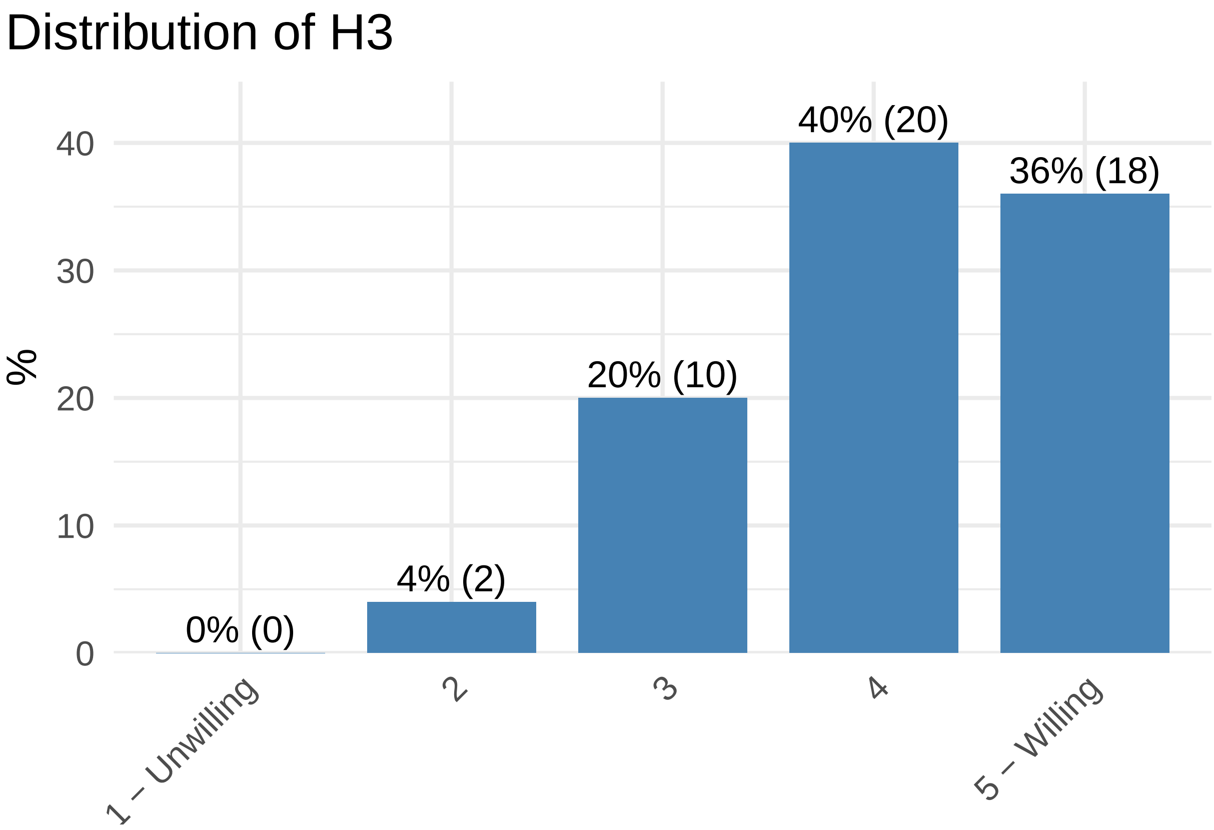
2	2	4.00
3	10	20.00
4	20	40.00
5 - Willing	18	36.00



Final Comments and Additional Information

Question	response
Comments	The 47th President of the United States has appointed people who claim to be placing a higher priority on open science, especially for publicly funded science. The authenticity of the adminstration's interest in open science may be questionable, but their reintroduction of open science into public discourse may incentivize even more open science practices in proposals for publicly funded research.

Question	response
Comments	So sorry, but I'm afraid I don't really remember the exact number of projects I've had over the past five years that didn't end up getting completed and published. So my answers to all of those questions are just guesses or estimates. (By contrast, I was easily able to report the exact number of experimental papers I did over the past five years that were published.)
Comments	This survey felt a bit long for me as a non-native English user.
Comments	As mentioned already, I mostly don't do experimental philosophy, except with some co-authors.
Comments	My practices have changed significantly as I've gained expertise. My early code will never see the light of data because it is horrendous. I could go through and clean it up for dissemination if the incentives are there, but they aren't. Now my code and workflow is a lot more polished, it's a lot easier and less stressful to share data and code. My experience with the file drawer problem is that it depends a lot on the group/PI. Some PIs are very very bad about file drawer data, as they are hunting around for results that they like and can build the narrative they want (At an unnamed group, I probably only published 1/10th of the data I collected there). Other PIs run 3 studies and then publish 3 studies. Fwiw, a fair amount of my unpublished data is because I had a talk coming up, I wanted to present something new and cool, didn't have anything new and cool, so quickly threw together a study to see if the project is worth doing further. It's sitting in a drawer because 1) the actual study wasn't up to standards needed to publish it, just the standards for a cool talk, 2) I didn't find the time and motivation to follow-up with a standalone paper.
Comments	As written in another write-in field: I've shared data/stimuli/analysis code for all of my papers. I do, however, have some file drawer problems of my own. Papers to which I collected a lot of data, but could not yet find a coherent narrative to turn them into an argument neat enough for a paper. I think about these a lot and sometimes I feel guilt about not having done that yet. I feel that the field develops a bit of a skewed perspective because these papers get published late or never. As soon as I have the time (which is scarce for early career professors in third-world countries such as myself), I intend to publish these papers. This includes a firm commitment to sharing them as pre-prints and to publish the underlying data/stimuli/analysis code. Moreover: even for published papers, when there are pilots/other studies that weren't reported, I make a point of having stimuli/data/analysis code + a note explaining the results and why they were not included on the final argument on OSF, as well as a footnote acknowledging that in the published piece.

X-Phi vs The World
